CONQUEROR

SAFE FOR RETAIL AND OTHER
COMMERCIAL APPLICATIONS

Every 24 hours in Britain over 800 commercial premises are burgled. Many old safes in use today were made before the development of modern cutting tools. They may look imposing but can often be opened by today's burglars in just a few minutes.

The Chubb Conqueror gives a high standard of protection and resists attacks with disc cutters, drills, oxy-acetylene and explosives.

BARRIER MATERIAL The body is 84mm thick and is constructed from inner and outer steel enclosing Chubb F4 barrier material. The jointless F4 barrier material is resistant to torch and disc attack and is securely anchored to the inner lining to provide excellent resistance to delamination attack.

The door is 147mm thick including the lock case. There is a total of 84mm of barrier material including F4 and other drill resisting materials.

BOLTWORK AND LOCKS

There are 32mm diameter bolts on all 4 sides of the door. These are secured by either a single lock or dual locks. There is a choice of keylock or combination lock. The combination lock has 3 wheels and is capable of being set to 1,000,000 different codes.

The locks are further protected by live and dead relocking devices which are set

in the on-guard position when the safe is locked. They provide protection against attacks including explosives.

TIMELOCK A timelock can also be fitted to the sizes 2 and over.

INDEPENDENT FIRE TEST The independent Swedish National Testing Authority have awarded the Conqueror their A30 fire test label for document protection.

FITTINGS The Conqueror contains racking to accept the following optional fittings: • Heavy Duty Shelves • Lockable Cupboards • Lockable Drawers • Deposit Traps. For details see table overleaf.

BASE FIXING The Conqueror is prepared for secure fixing, to a wood or concrete floor.

FINISH Attractive warm light grey spatter finish to suit any environment.

The handle trimplate and keyhole cover are a warm dark grey.

PROOF OF PERFORMANCE

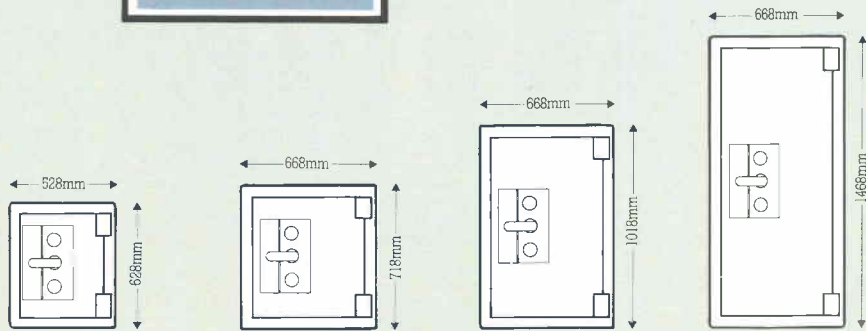

All Chubb safes are thoroughly tested to destruction at our Wolverhampton factory
This is what our customers had to say about this quality of Chubb Safe.

“ The thieves spent several hours trying to open the safe using oxy-acetylene, hammers and chisels etc. All attempts ended in failure....”
Coca-Cola Southern Bottlers Ltd.

“Raiders broke in made a very determined attack on our safe and from what we know spent a few hours with oxy-acetylene and high powered drills to do this amount of damage. However, despite all their efforts, they were unsuccessful.”
Wilkie-Hooke Ltd.

DIMENSIONS

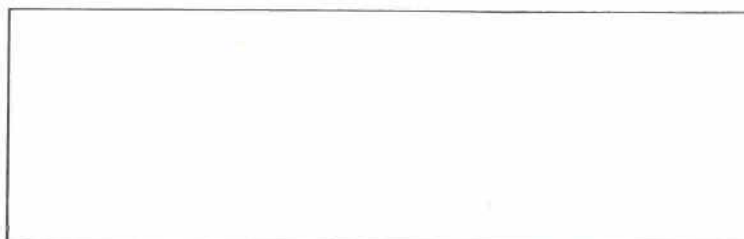

The Chubb Conqueror is made in Britain
